iGugulam Community Programme

PROJECT PRESENTATION: PRP 372S

Graduate Attributes for WPBL and eWIL

DUE DATE: 04 May 2026

Student:	ABDUL MALIK MUHAMMED: 230388175
Course:	PRP372S

Graduate Attributes for WPBL and eWIL

Statement Before Proceeding

Before I start, I would like to state that I am currently unable to be part of a fixed group at this stage. I am dealing with difficult circumstances at home, including supporting a family member who is unwell, and this has made regular class interaction difficult for me. However, I am keeping up to date with Blackboard, using the available learning material, and contacting people where I can. This submission has therefore been prepared as my individual version of the project work.

Ubuntu

Demonstrate your understanding of the needs, values, and cultures of people

My project supports learners in the iGugulam Community Programme by focusing on access, simplicity, and academic confidence. StudyBridge Hub is designed with learners and parents in mind, especially people who may not always have access to structured after-school support or advanced digital tools.

Demonstrate an example of your interpersonal skills

Even though I am completing this version individually, I still communicate respectfully when asking for guidance and checking Blackboard updates. I try to listen, respond professionally, and use the information available to me so that my project remains aligned with the academic expectations.

Demonstrate an example of your interprofessional skills

The project requires me to think across different roles such as Agile Lead, Developer, Tester, Product Owner, and Analyst. By switching between these responsibilities, I am learning how different professional roles contribute to the final product.

Knowing, Technological Capability & Foresight

Demonstrate an example of how you have used technology and knowledge to effect change in society

I am using web technologies, Agile planning, and GitHub Pages to create a learning-support platform that can make educational resources easier to access. The goal is to use technology in a practical way so that learners can receive guidance and parents can understand the support available.

Resilience & Problem-Solving Capability

Demonstrate an example of how you confidently engage in solving complex problems in society

The problem I identified is that learners may struggle academically when support is not easy to find or when families do not know where to begin. StudyBridge Hub responds to this by organising resources, tutorials, and guidance into one simple platform.

Demonstrate an example of your perseverance in the face of obstacles, failures, challenges

This project has required me to continue working even while dealing with pressure at home and limited class interaction. I am showing perseverance by staying up to date with Blackboard, completing the documentation, and continuing to build a clear project plan.

Demonstrate an example of organisational and financial skills

I am using free or available tools such as GitHub, Trello or a taskboard, Blackboard resources, and basic development tools. This helps me manage the project without extra costs while still organising tasks into sprints and milestones.

Demonstrate an example of entrepreneurship, innovation, and research

The project idea is innovative because it treats educational support as a service that can be made more accessible through a digital platform. I researched similar learning-support ideas and used that research to shape features that are realistic for learners and parents.

Ethical Capability & Respect

Demonstrate an example of how you use your moral values to make ethical decisions

Because the project involves learners, ethical decisions are important. I would protect learner information, avoid collecting unnecessary personal details, and make sure the platform is respectful, safe, and focused on academic support.

Demonstrate an example of how you acted on unethical practices

If I noticed unfair work, poor communication, or copied content, I would address it respectfully and correct it before submission. In my own work, I am making sure the project is presented as my individual version and that my progress is documented honestly.
